-  DIGITALLY
-  DESIGN
-  HSE

Helping you get started with digital HSE management

Your tasks:

- Multiple obligations
- Complex responsibilities
- Increasing risks

Our offer:

- Legal security and auditing reliability
- Transparency
- Practical, user-focused digitisation
- Easy integration of all participants

■ Create clarity

eplas makes fulfilment of complex obligations and procedures easy. We precisely map your HSE requirements. There is no reduction of regulations, but also no additional and unnecessary one either. eplas always informs responsible individuals about upcoming tasks in good time. When processing tasks, all documents and data can be accessed directly from the respective task. Everyone immediately knows what needs to be done.

■ Create transparency

eplas makes data uniform and valid. Data is linked via the various HSE disciplines. Relationships, connections and effects become transparent; necessary actions become logically consequent. The possibility to retrieve information and audit at the touch of a button is no longer a dream, but a reality. The prerequisite for moving from reactive to active HSE management has been created.

■ Shaping digitisation together

You know your company and you know how your employees "tick". Our advisors have the implementation experience and eplas has the technological prerequisites. Together, we digitise your HSE processes. When doing so, it is important to us that your tasks are made easier, that you have room for optimisation and that your employees are integrated into the new processes simply and intuitively.

Your benefits with eplas

Risk assessment

The risk assessment in eplas works exactly as you need it to. Whether it be in the classic way via the respective professional association's factor menu, or with adapted, individually optimised structures. Or completely focused on the user as a dynamic checklist?

Training/qualification management

Efficient approach to the organisation and implementation of qualifications, training, instruction and briefings through the use of e-learning, training classes and blended learning (the combination of training classes and e-learning).

Health management

Preventative occupational medical care

Manage your preventative occupational medical care and maintain your legally prescribed preventative care log. Plan and document your offered, mandatory and desired preventative care using the intelligent scheduling and room planning functions, which actively support and significantly facilitate processes for employees, managers and occupational physicians.

Accident & incident management

With eplas accident and incident management, you can document all accidents, near-accidents and other incidents in a clear and auditable manner. Take advantage of the possibilities offered by our module and work through the accident process in a structured and documented manner, from recording and official accident reports through to follow-up management, including accident statistics.

Hazardous substance management

Hazardous substance register, substitution tests, application-specific hazard assessments, safety data sheets – it is good to have simple solutions for complete interrelationships. And why not also benefit from the eplas "Hazardous Substance Shop"?

Operating instructions

This module allows you to create and manage unified, legally compliant and up-to-date operating instructions for the entire company. Provide all employees and managers with audit-proof documentation at any time and easily increase the safety of all people in the company.

Modules for occupational safety

Working and operating resources

What tools, operating resources or PPE are in circulation? When are tests due and where are they documented? Which inventory needs to be renewed? It would be great if you could avoid using paper and Excel to answer these questions.

Experience Infinite possibilities

Compliance management

In a world full of rights, regulations and obligations – whether they originate externally or internally – you need focus. Employees – in particular those with specialist or management responsibilities – must be able to see their obligations clearly and at a glance.

Visitor management

Administer visitors without great effort. Easy to use management tool, which allows visitors to enter relevant data effortlessly and can easily create visitor IDs – also with a photo if required.

Audit management

Audits & inspections

Templates for HSE and QM inspection logs can be easily created with eplas; they can then be retrieved and edited on site via tablet. Photo function and automatic measures management included. Digitisation can be so simple. If audits will be carried out regularly, they can be planned and assigned using audit management. Automatic audit planning with a rolling assignment of auditors is also possible.

Checklists & workflows

Inspections, briefings, incident reports, entries for the use of new hazardous substances etc. – in the areas of work and health protection there are a large amount of checklists, forms and approval processes. With eplas, you can easily map these digitally. This gives you transparency, saves working time, allows you to supply information at any time and provides you with data that can be evaluated at the touch of a button.

Achieve a lot together

Digitisation

Everybody's talking about digitisation. Many have concepts. We have a solution that has proven itself in practice.

Take, for instance, the fact that eplas allows you to easily display your current forms, inspection protocols, applications and routing slips as digital forms. Data is no longer recorded on paper, but rather directly (e.g. via tablet or smartphone). And of course this is also possible offline in areas where there is neither a mobile network nor WiFi.

Data distribution, information, tasks, decisions, feedback – you can design processes yourself with the process editor and eplas will execute them automatically and save each step in an audit-proof manner. Specifications, DIN standards and company objectives are not only digitally documented, but also digitally automated. Many solutions have an app. eplas IS the app. We employ the latest technologies within it. Do you want to know more? – Talk to us.

The eplas APP!

Always with you, even on the road

- Incident reports
- Inspection logs
- Audit results
- Online and offline and much more via smartphone or tablet

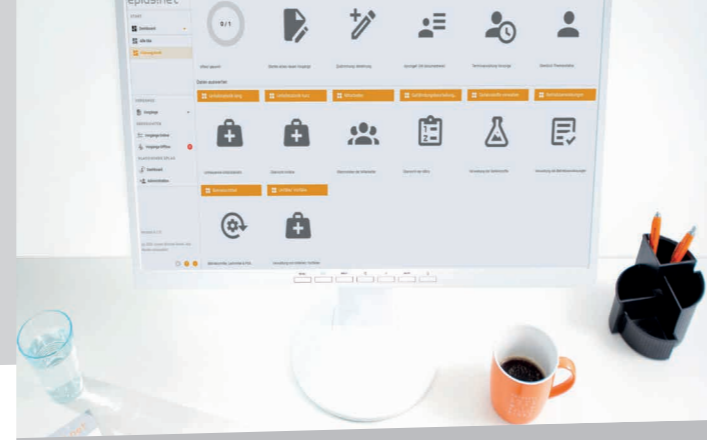

The eplas Dashboard

Intuitive operation

Company management, executives, HSE management, safety specialists, employees – a wide range of roles require fast and comprehensible access to information and data. The eplas Dashboard allows you to generate role-related information and work views. The user in question can also further individualise these if they so wish.

Easy to understand

With eplas, you can centrally manage all information relevant to occupational health and safety and make it available quickly and separately to those affected. That is the principle of eplas! The Dashboard as central control surface: here you can see at a glance what still needs to be done and which items are due or overdue.

SaaS/hosting certified according to:

✓ ISO 9001

✓ ISO 14001

✓ ISO 20000

✓ ISO 22301

✓ ISO 27001

✓ ISO 27017

✓ ISO 27018

SaaS or on-Premise?

You have good reasons for your IT strategy and they are important to us. You are therefore free to decide whether you want to support eplas in your own IT infrastructure (on-premise) or whether we can host eplas for you (SaaS). The license costs remain the same for you. **Rent or purchase?** The licensing of the modules is modular and you can choose between the rental model and the purchase model. Regardless of whether you use eplas as an SaaS solution or on-premise.

Your individual eplas

eplas offers you the full range of HSE topics. However, a full switchover is not always possible or sensible. No problem. All modules can be used individually or in any combination. You do not need a basic module and can add further modules to the licensed scope at any time without additional installation effort.

Precise fit with no hidden costs

Benefit from eplas

■ Topic shop

■ Why keep reinventing the wheel? Profit from our training library. Via the eplas topic shop, you can access over 150 training topics from various cross-sectoral topic areas. In addition to classics such as "General Safety Instruction Pursuant to Regulation 1 of the German Social Accident Insurance", "Personal Protective Equipment" and "Forklift Trucks" are also available for more specific topics such as "Safety for Fitters and Maintenance Staff", "Order Pickers" or "Wheel Loaders".

The offer is rounded out with, among other things, topics from the areas of "Data Protection", "Environmental Protection", "Compliance" or even the "Medical Environment". Many topics are also available in several languages such as English, Polish, Romanian, Russian and Italian. Other languages are available upon request. You benefit from our update service in the event of any legal changes: we keep the training up to date and inform you of any changes.

■ Hazardous Substance Shop

■ In the midst of a digital revolution, it is irritating that, day after day, many companies still have to manually enter identical data from identical safety data sheets into in Excel or another database to create an individual hazardous substances register. It will probably still take some time for electronic exchange formats such as SDSComXML to establish themselves. Work more efficiently and benefit from the more than 500 hazardous substances currently stored in our Hazardous Substances Shop. You can import the data records of the hazardous substances you use, including safety data sheets, simply and at the push of a button. Here, too, you benefit from our update service in the event of changes.

eplas guarantees gapless and legally compliant documentation.

eplas is easy to use thanks to its intuitive usability in the application.

eplas allows cross-departmental exchange.

The right solution for all departments at all times

■ Workspaces/departments

■ The organisational structuring of eplas is carried out via Org-Structure and a parallel organisational unit structure, e.g. for locations, buildings, rooms, machines and plants. In conjunction with the far-reaching role and rights concept, the structuring possibilities give every user – no matter in which department – precise access to the work areas.

Receive the required data records and documents. The possible assignment of disciplinary and organisational responsibilities enables you to easily map complex authorisation structures, which also allows you to set up departmental responsibilities.

Jochen Blöcher GmbH

Jochen Blöcher GmbH is a company that offers a partnership-likesense of cohesion – both within the company as well as in dealings with customers and partners. The company was founded in 2000 as a sole proprietorship and changed its legal form to a limited liability company in 2005. The move to new headquarters in 2010 followed by an extension with a second building (which features a nursery for the under-threes, a fitness-room, ergonomic workplaces and renewable energy) in 2017 symbolises the steady yet organic growth of our company.

Welcome to the team

When implementing eplas in your company, we work together to make your goals and ideas a reality. By participating in events such as our eplas campus and our expert workshops, you can become a part of eplas' continuing development. Every module, every feature, every function in eplas carries in its DNA the firm desire to achieve something extraordinary together with and for our customers.

Your Jochen Blöcher

"eplas helped us to design our processes uniformly within the EEW Group and to make them legally compliant. Starting with the necessary training in the field of occupational safety, we now use various other products to implement our goals. As an elementary tool of our management system, eplas saves us a lot of time when creating documents for system management and tracking necessary measures at all process levels. Jochen Blöcher GmbH is our expert contact and solution finder."

**Heino Taube – HSE-Manager
EEW-Group**

"Thanks to eplas, we were able to structure occupational safety in a much better way. Employees can then complete their training as they wish. Managers always have an overview of all tasks relating to occupational safety. The ease of operation increases the willingness of managers to work on industrial safety topics. The use of eplas has reduced the paper and file mountain in the company, as many documents no longer have to be printed out. We receive fast, uncomplicated and goal-oriented assistance with any problems."

**Thomas Heenen - Safety and Environment
LEMKEN GmbH & Co. KG**

"Our work with Jochen Blöcher GmbH is characterised to a large extent by a trusting relationship that has grown over many years. The essential advantages of eplas for our company are speed, planning and evaluation possibilities as well as significantly increased legal security. For us, these advantages have arisen over many years as an added value; this is down to the fact that the modules necessary for us are linked together in one system and our individual, already very special requirements have been implemented again and again in the form of new, innovative solutions."

**Jochen Hermes – Management Representative
Gerhardi GmbH**
